- Damage or fraying
- Color consistency
- Absence of thick or thin spots

Step 2: Cleaning and Conditioning

Wash the yarn if necessary to remove any residual sizing, oils, or impurities. Use gentle detergents suitable for the fiber type. After washing, ensure the yarn is completely dry before proceeding to prevent mold or fiber damage.

Step 3: Winding Yarn onto Bobbins or Cones

Use a winding machine or by hand, wind the yarn onto bobbins or cones, maintaining even tension throughout. Proper winding prevents tangling and ensures smooth unwinding on the loom.

Step 4: Warping the Loom

Choose your warping method:

- Direct Warping: Suitable for small projects; involves winding warp directly onto the loom.
- Indirect Warping: Uses a warping board or mill; ideal for longer or multiple warp ends.

Calculate the warp length based on the fabric dimensions, adding extra length for selvages and finishing.

Step 5: Tension Control and Warp Beaming

Ensure all warp ends are tensioned uniformly. Use tension boxes or weights if necessary. Carefully wind the warp onto the warp beam, keeping tension consistent to prevent slack or tight spots.

Step 6: Mounting and Adjusting on the Loom

Attach the warp to the loom?s front apron and back beam, adjusting tension to ensure evenness. Use lease sticks to keep the warp organized and prevent entanglement.

Step 7: Final Checks and Troubleshooting

Before weaving, double-check the warp for:

- Proper tension
- Correct threading through heddles and reed
- Evenness and absence of tangles
